CHOOSE WORKRITE FOR COMPLIANCE AND QUALITY

On March 19, 2010, OSHA issued a memorandum advising that it will cite for employees not wearing FR clothing during certain oil and gas drilling operations. The citation guideline states, "Where appropriate, OSHA Compliance Safety and Health Officer (CSHO's) will cite 29 CFR 1910.132(a) for the failure to provide and ensure the use of FRC in oil and gas drilling, well servicing, or production-related operations when there is a potential for flash fire hazards." To meet the needs of the oil and gas industry, Workrite has developed a complete line of workwear for the drilling contractor market.

Since 1973, we've focused solely on flame-resistant garments. We provide a broad line of styles featuring the most innovative and trusted fabrics available today. Our durable, high quality apparel is made from fabrics that are tested to reduce injury due to short duration thermal exposures and will meet both OSHA requirements and provide wearer protection. Garments made from Indura®, Ultra Soft® and Nomex® IIIA won't ignite and continue to burn and will help minimize burn injury.

Workrite knows how to service business to business customers both large and small. We understand your needs when it comes to customer service and delivery. We can even help you set-up your flame-resistant program with one of our local distribution partners.

With our manufacturing flexibility, we have the ability to add customizations to your garments including name tags, reflective tape, company logos and additionally non stock sizes and color requests. In fact, we offer more than 90 ways you can modify your garment to meet your specific needs.

With garments from Workrite, you'll get comfortable and durable flame-resistant workwear that can stand up to harsh working conditions. Made by a company known throughout the industry for its FR expertise and high quality standards since 1973.

Series 112 Industrial Coverall
